Install IPFS

Join the future of the web right now — just choose the option that's right for you.

Store and provide files

IPFS Desktop

IPFS for everyone

The IPFS Desktop app offers menubar/tray shortcuts and an easy interface for adding, pinning, and sharing files — plus a full IPFS node ready for heavy-duty hosting and development. Great for developers and less experienced users alike.

[Install IPFS Desktop](#)

Command-line install

All IPFS, no frills

Just want to use IPFS from your terminal? Follow these step-by-step instructions for getting up and running on the command line using the Go implementation of IPFS. Includes directions for Windows, macOS, and Linux.

[Install the IPFS CLI](#)

IPFS Companion

Add IPFS to your browser

Get `ipfs://` address support and more in your browser with this extension for

IPFS Cluster

Orchestrate multiple IPFS nodes

Automatically allocate, replicate, and track your data as a global pinset distributed among a

Copy and Paste this into notepad, replace the existing link with your desired link.

Name your file, add .html to the end of the name and save.

Go to the newly saved file, right click and add to IPFS.

Using IPFS

Once you add your file to IPFS, it will appear here.

The screenshot displays the IPFS web interface. At the top, the IPFS logo and name are visible. Below the logo, a navigation bar contains five icons: STATUS, FILES, EXPLORE, PEERS, and SETTINGS. A red arrow points to the 'FILES' icon. Below the navigation bar, there is a search bar labeled 'Hash/bafyHash' with a 'Browse' button and a search icon. Below the search bar, a summary bar shows statistics: 15B files, 1 pins, 2k blocks, and 68MB repo, along with a '+ Import' button. Below the summary bar, a table lists files. The first entry is 'ensvision.html' with a file icon and a red arrow pointing to it. Below the filename is the IPFS hash: QmWdzP46oYvgabZSRJc6Nj6chFrmXHL7RUu5QRMM35a3hE.

Name ↑
 ensvision.html QmWdzP46oYvgabZSRJc6Nj6chFrmXHL7RUu5QRMM35a3hE

Head over to the ENS site and connect your wallet, then select the name you want to use.

Congratulations you're done.

So, at this point you'll see the ipfs link and your ENS address as clickable hyperlinks under your ENS content. You will likely get cloudflare errors/timeout errors initially. The first time it loads may take awhile, even longer than 24 hours from personal experience (just try your link every few hours, or wait until later that day). So be patient. But once it works, it will work clean and fast. With typical browsers you'll have to add .limo or .link to the end. With Brave browser properly configured, you can simply type ens.eth into your browser and it will work.

The screenshot shows the ENS website interface for the account 'soy.eth'. The page displays various details and records:

- Account Information:** soy.eth, Main Network, Disconnect button.
- Navigation:** My Account, Favourites, FAQ, About.
- Parent:** eth
- Registrant:** 0x35cf542AC4B692F62E515c61b7c3a8aC719eDd5d
